# Solid State Relays Industrial, 1-Phase ZS (IO) w. LED Types RAM1A, RAM1B

- Zero switching (RAM1A) or instant-on switching (RAM1B) AC Solid State Relay
- Direct copper bonding (DCB) technology
- LED indication
- Clip-on IP 20 protection cover
- Self-lifting terminals
- Housing free of moulding mass
- 2 input ranges: 3-32 \* and 20-280 VAC/22-48 VDC
- Operational ratings: Up to 125 AACrms and 690 VACrms
- Blocking voltage: Up to 1600 V<sub>p</sub>
- Opto-isolation: > 4000 VACrms
- Integrated overvoltage protection by self switching (suffix "Z" option)

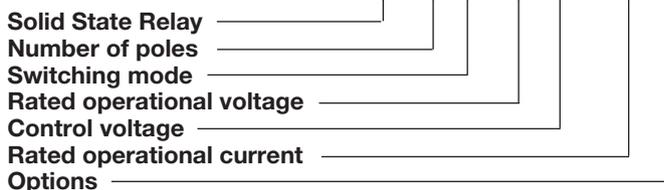

## Product Description

The industrial, 1-phase relay with antiparallel thyristor output is the most widely used industrial SSR due to its multiple application possibilities. The relay can be used for resistive, inductive and capacitive loads. The zero switching relay switches ON when the sinusoidal curve crosses zero and switches OFF when the current cross-

es zero. The instant-on relay with DC control input can be used for phase angle control. The built-in snubber secures transient protection. The LED indicates the status of the control input. The clip-on cover secures touch protection (IP 20). Protected output terminals can handle cables up to 16 mm<sup>2</sup>.

## Ordering Key

**RAM 1 A 60 D 125 Z**

## Type Selection

Switching mode	Rated operational voltage	Control voltage	Rated operational current	Options
A: Zero Switching	23: 230VACrms	A: 20-280 VAC/22-48VDC	25: 25AACrms	Z: Overvoltage protection (self-switching)
B: Instant-on switching	60: 600VACrms	D: 3 - 32VDC*	50: 50AACrms	
	69: 690VACrms		75: 75AACrms	
		* 4 to 32VDC for RAM1A60..., RAM1A69...	100: 100AACrms	
		* 4 to 32VDC for RAM1B types	125: 125AACrms	

## Selection Guide - Zero Cross

Rated operational voltage	Blocking voltage	Control voltage	Rated operational current				
			25A	50A	75A	100A	125A
230VACrms	650V <sub>p</sub>	3 - 32VDC	RAM1A23D25	RAM1A23D50	RAM1A23D75	RAM1A23D100	RAM1A23D125
		20-280VAC/22-48VDC	RAM1A23A25	RAM1A23A50	RAM1A23A75	RAM1A23A100	RAM1A23A125
600VACrms	1200V <sub>p</sub>	4 - 32VDC	RAM1A60D25	RAM1A60D50	RAM1A60D75	RAM1A60D100	RAM1A60D125
		20-280VAC/22-48VDC	RAM1A60A25	RAM1A60A50	RAM1A60A75	RAM1A60A100	RAM1A60A125
690VACrms	1600V <sub>p</sub>	4-32VDC	-	-	RAM1A69D75	RAM1A69D100	RAM1A69D125
		20-280VAC/ 22-48VDC	-	-	RAM1A69A75	RAM1A69A100	RAM1A69A125

### Options

1 Overvoltage protection by self-switching: add suffix Z to include. Example: RAM1A60D25Z. Not applicable for 690 V version.

## Selection Guide - Random switching

Rated operational voltage	Blocking voltage	Control voltage	Rated operational current				
			25A	50A	75A	100A	125A
230VACrms	650V <sub>p</sub>	4 - 32VDC	RAM1B23D25	RAM1B23D50	RAM1B23D75	RAM1B23D100	RAM1B23D125
600VACrms	1200V <sub>p</sub>	4 - 32VDC	RAM1B60D25	RAM1B60D50	RAM1B60D75	RAM1B60D100	RAM1B60D125
		20-280VAC/22-48VDC	-	-	-	-	RAM1B60A125

## General Specifications

<b>Radio Interference Voltage Emission (Conducted) 0.15 - 30MHz</b>	IEC/EN 55011	30 - 1000MHz	Class B
	Class A (industrial) with filters		
	IEC/EN 60947-4-3		
	Class A (no filtering needed up to 75AAC)		

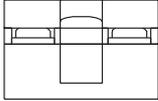

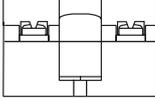

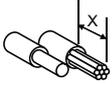

**Notes:**

- Use of AC solid state relays may, according to the application and the load current, cause conducted radio interferences. Use of mains filters may be necessary for cases where the user must meet E.M.C requirements. The capacitor values given inside the filtering specification tables should be taken only as indications, the filter attenuation will depend on the final application.
- The control terminals A1, A2 (RAM1..A) shall be supplied by a secondary circuit where power is limited by a transformer, rectifier, voltage divider, or similar device that derives power from a primary circuit, and where the short-circuit limit between conductors of the secondary circuit or between conductors and ground is 1500 VA or less. The short-circuit volt ampere limit is the product of the open circuit voltage and the short circuit ampere.
- Control input lines must be installed together to maintain products' susceptibility to Radio Frequency interference.
- Performance Criteria 1: No degradation of performance or loss of function is allowed when the product is operated as intended.
- Performance Criteria 2: During the test, degradation of performance or partial loss of function is allowed. However, when the test is complete the product should return operating as intended by itself.
- Performance Criteria 3: Temporary loss of function is allowed, provided the function can be restored by manual operation of the controls.

- Type KK071CUT
- Dimensions: 35 x 43 x 0.25mm
- Packing quantity: 50pcs.

- Touch safety cover
- Type RMIP20
- IP20 protection degree
- Pack size: 20 pieces

All accessories can be ordered pre-assembled with Solid State Relays.  
Other accessories include DIN rail adaptors, fuses, varistors and spacers.

# Solid State Relays Industrial, 1-Phase ZS w. LED and Built-in Varistor Types RAM1A..G

- Zero switching AC Solid State Relay
- Direct copper bonding (DCB) technology
- Operational ratings: Up to 125 AACrms and 600 VACrms
- 2 input ranges: 3-32 VDC\* and 20-280 VAC/22-48 VDC
- Built-in varistor on output
- LED indication
- Clip-on IP 20 protection cover
- Self-lifting terminals
- Housing free of moulding mass
- VDE certified for Glow wire test according to EN60335-1

## Product Description

The industrial, 1-phase relay with antiparallel thyristor output is the most widely used industrial SSR due to its multiple application possibilities. The relay can be used for resistive, inductive and capacitive loads. The zero switching relay switches ON when the sinusoidal curve

crosses zero and switches OFF when the current crosses zero. The built-in varistor secures transient protection. The LED indicates the status of the control input. The clip-on cover secures touch protection (IP 20). Protected output terminals can handle cables up to 16 mm<sup>2</sup>.

<b>Voltage Emission (Conducted)</b>	IEC/EN 55011	<b>30 - 1000 MHz</b>	Class B
<b>0.15 - 30 MHz</b>	Class A (industrial) with filters IEC/EN 60947-4-3 Class A (no filtering needed up to 75AAC)		

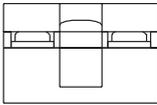

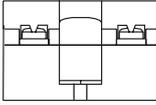

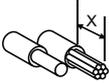

### Notes:

- Use of AC solid state relays may, according to the application and the load current, cause conducted radio interferences. Use of mains filters may be necessary for cases where the user must meet E.M.C requirements. The capacitor values given inside the filtering specification tables should be taken only as indications, the filter attenuation will depend on the final application.
- The control terminals A1, A2 (RAM1..A..G) shall be supplied by a secondary circuit where power is limited by a transformer, rectifier, voltage divider, or similar device that derives power from a primary circuit, and where the short-circuit limit between conductors of the secondary circuit or between conductors and ground is 1500 VA or less. The short-circuit volt ampere limit is the product of the open circuit voltage and the short circuit ampere.
- Control input lines must be installed together to maintain products' susceptibility to Radio Frequency interference.
- Performance Criteria 1: No degradation of performance or loss of function is allowed when the product is operated as intended.
- Performance Criteria 2: During the test, degradation of performance or partial loss of function is allowed. However, when the test is complete the product should return operating as intended by itself.
- Performance Criteria 3: Temporary loss of function is allowed, provided the function can be restored by manual operation of the controls.
