# Motor Controllers AC Variable Frequency Drives Type VariFlex<sup>3</sup> RVLF

CARLO GAVAZZI

RVLF

- AC variable speed drive for use with AC induction motors
- V/F control + Auto-torque compensation function
- Input voltage ranges: 1-ph 200~240V, 3-ph 380~480V
- 2 frame sizes
- Conforms to EMC standard EN 61800-3
- Parameter settings by keypad
- IP 20 models with power switch
- DIN-rail or panel mounting
- Built-in EMI filter
- Frequency 0.01~650.00Hz
- Integrated ModBus communication
- Communication interface modules for Profibus/DeviceNet/Ethernet (TCP/IP)/CANopen

## Product Description

The RVLF is a simple and compact AC variable speed drive for use with 3-phase AC induction motors. The drives have compact dimensions and can be installed side by side to save space. The full range of products

covers all voltage ratings from the single phase 200VAC up to the three phase 480VAC. The RVLF uses state-of-the-art microprocessor technology which controls all drive functions.

## Installation Space

Sufficient air circulation space for cooling should be provided, as shown in examples below.  
**(We recommend that the drive is installed on a dissipative surface).**

### Single unit installation

In order to ensure optimal cooling the transducer should be installed vertically.

#### Frames A & B.

### Side by side installation

The necessary physical space and cooling should be provided, based on the ambient temperature and the heat loss in the panel.

## Environment

### Installation site

Install in an environment that will not have an adverse effect on the operation of the unit and ensure that there is no exposure to the following:

- Direct sunlight, rain or moisture.
- Oil, mist or salt.
- Dust, lint fibres, small metal filings or corrosive liquids or gas.
- Electromagnetic interference from sources such as welding equipment.
- Radioactive or flammable materials.
- Excessive vibration from machines such as stamping or punching machines.  
 (Add vibration-proof pads if necessary).
